Nanobiotix Partners With Lianbio To Develop And Commercialize Potential First-In-Class Radioenhancer NBTXR3 Across Tumor Types And Therapeutic Combinations In China And Other Asian Markets

May 11, 2021

- **LianBio to collaborate in the development of NBTXR3, and contribute to enrollment in five future global registrational studies across several tumor types and therapeutic combinations including immunotherapy**
- **Supports the expansion of global phase III registrational study in head and neck cancer into Greater China, with longer term strategic alignment across multiple tumor indications and therapeutic combinations**

Paris, France; Cambridge, Massachusetts (USA); Shanghai; and Princeton, NJ; May 11, 2021 – [NANOBIOTIX](#) (Euronext : NANO — NASDAQ: NBTX), a late-stage clinical biotechnology company pioneering physics-based approaches to expand treatment possibilities for patients with cancer, today announced a partnership with LianBio, a biotechnology company dedicated to bringing paradigm-shifting medicines to patients in China and major Asian markets, to develop and commercialize Nanobiotix lead product candidate NBTXR3, a potential first-in-class radioenhancer, in Greater China (mainland China, Hong Kong, Taiwan, and Macau), South Korea, Singapore and Thailand.

Shanghai and Princeton-based LianBio was founded by Perceptive Advisors with an innovative partnership model to develop and commercialize therapeutics in China and other Asian markets. LianBio's cross-border development and commercialization expertise includes strong capabilities in oncology and NBTXR3 is the third investigational cancer treatment in the company's portfolio. Given the global high unmet need in locally advanced and metastatic cancers, along with data supporting the potential of NBTXR3 across solid and metastatic tumor types, Nanobiotix continues to leverage strategic relationships with world class collaborators to expand and accelerate its pipeline while prioritizing Company resources to support development in head and neck cancer and immunotherapy.

"Discovery of practice-changing therapeutics for major diseases through a physics-based approach, with the support of people committed to making a difference for humanity, is our mission at Nanobiotix. We have long believed that NBTXR3 will significantly improve treatment outcomes for patients with any solid or metastatic tumor, and we are grateful that a partner with the talent and capability of LianBio has agreed to walk with us in our journey. Cancer is a disease that knows no borders and bringing our innovation to patients in Greater China with speed and determination is an absolute necessity," said Nanobiotix CEO and co-founder Laurent Levy.

"We purpose-built LianBio with a next-generation licensing model that enables us to meaningfully contribute to our partners' global development initiatives in order to accelerate the availability of transformative therapeutics for patients throughout Asia," said Konstantin Poukalov, Executive Chairman of LianBio and Managing Director of Perceptive Advisors. *"We believe NBTXR3 has a highly targeted nature and broadly applicable mechanism of action and thus has the potential to change radiotherapy and immuno-oncology treatment paradigms by addressing key limitations of current standards of care."*

"The NBTXR3 therapeutic approach offers a promising avenue to address the significant burden of disease across multiple tumor types," said Debra Yu, M.D., President and Chief Business Officer, LianBio. *"Our partnership will provide Nanobiotix with access to LianBio's regional expertise and is designed to enable Nanobiotix to reach the growing number of cancer patients in China and other Asian markets who are in need of improved treatment options."*

Under the terms of the agreement, LianBio will obtain exclusive rights to develop and commercialize NBTXR3 in Greater China, South Korea, Singapore, and Thailand. Nanobiotix will receive a \$20 million upfront payment and is entitled to receive up to an aggregate of \$220 million in potential contingent, development and commercialization milestone payments. Nanobiotix will also be eligible to receive tiered, low double-digit royalties based on net sales of NBTXR3 in the licensed territories. LianBio will participate in the Nanobiotix global phase III registrational study evaluating NBTXR3 for patients with locally advanced head and neck squamous cell carcinoma (HNSCC; head and neck cancer) by enrolling 100 patients in China in the study. In addition to the phase III head and neck cancer study, LianBio has committed to enroll patients in four additional registrational studies conducted by Nanobiotix across indications and therapeutic combinations potentially including immunotherapy. LianBio will fund all development and commercialization expenses in the collaboration territory, and Nanobiotix will continue to fund all development and commercialization expenses in all other geographies.

About NANOBIOTIX

Nanobiotix is a late-stage clinical biotechnology company pioneering disruptive, physics-based therapeutic approaches to revolutionize treatment outcomes for millions of patients; supported by people committed to making a difference for humanity. The company's philosophy is rooted in the concept of pushing past the boundaries of what is known to expand possibilities for human life.

Incorporated in 2003, Nanobiotix is headquartered in Paris, France. The company also has subsidiaries in Cambridge, Massachusetts (United States), France, Spain, Germany and Switzerland.

Nanobiotix has been listed on the regulated market of Euronext in Paris since 2012 and on the Nasdaq Global Select Market in New York City since December 2020.

Nanobiotix is the owner of more than 30 umbrella patents associated with three (3) nanotechnology platforms with applications in 1) oncology; 2) bioavailability and biodistribution; and 3) disorders of the central nervous system. The company's resources are primarily devoted to the development

of its lead product candidate— NBTXR3 —which is the product of its proprietary oncology platform and has already achieved market authorization in Europe for the treatment of patients with soft tissue sarcoma under the brand name Hensify®.
